Claim 39; Fig 9B; 67pp; English

The invention

relates to an isolated polypeptide consisting

ō, ω

Novel polypeptide for screening inhibitors of non-structural useful as therapeutic agents against hepatitis C virus, complength non-structural protease, or its truncation.

tural proteases comprises full

```
CC NS2/3 protease. Also included are (1) a composition (2) comprising an included are (1) a composition (2) comprising a sufficient concentration of lauryldiethylamine oxide (LDAO) comprising a sufficient concentration of lauryldiethylamine oxide (LDAO) comprising a sufficient concentration of lauryldiethylamine oxide (LDAO) comprising as ABG32198; (3) protease; (2) a NS2/3 inhibitory peptide appearing as ABG32198; (3) producing (M1) a refolded, inactive HCV NS2/3 chaotropic agent, refolding the protease in the presence of a reducing agent, and LDAO in the presence of reduced concentration of the chaotropic agent or a polar additive; (4) producing (M2) an active NS2/3 protease; (5) measuring (M3) the auto-cleavage active NS2/3 protease in a medium containing an activation detergent to induce auto-cleavage of the NS2/3 protease; (5) measuring (M3) the auto-cleavage activity of NS2/3 containing an incubating the active NS2/3 protease and produce containing a products or their fragments, and measuring the produced by M2 for sufficient time to induce auto-cleavage of NS2/3 protease and produce contained to incleaved NS2/3 protease produced by M2 for and (6) screening a potential inhibitor of auto-cleavage activity of an active NS2/3 protease, involving carrying out M3 in the presence of contained to incleavage products or their fragments. The protease is contained to the protential inhibitor of auto-cleavage activity of an active NS2/3 protease, cleavage products or their fragments. The protease is contained to the development of in vitro assays for screening novel inhibitors of uncleaved in contained the development of in vitro assays for screening novel inhibitors of uncleaved contained the development of the information dependence of contained the protease is contained to the development of the contained the protease. The protease is contained the protease is contained to the protease of contained 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          length HCV (hepatitis C virus) non-structural (NS)2/3 protease (referred to also as NS2/3 (810-1206)), or its truncation, having as its N-terminal residue amino acid sequence from residues 904 to 1206 of hepatitis C virus (HCV) 1b-40 full-length

Novel polypeptide for screening inhibitors of non-structural proteases useful as therapeutic agents against hepatitis C virus, comprises full length non-structural protease, or its truncation.

Claim 42; Fig 1B; 67pp; English.

The invention relates to an isolated polypeptide consisting of a fullcomparison of the potentials C virus) non-structural (NS)2/3 procease (referred CC length HCV (hepatitis C virus) non-structural (NS)2/3 procease (referred CC comparison of the potential CC residue amino acid 810 to 906, or having a minimal amino acid sequence CC from residues 904 to 1206 of hepatitis C virus (HCV) 1b-40 full-length CC (NS2/3) protease. Also included are (1) a composition (comprising a sufficient concentration of lauryldiathylamine oxide (LDAO) CC comprising as ABG32198; (3) protease in the protease is in a solution of comprising as ABG32198; (3) producing (M1) a refolded, inactive HCV NS2/3 protease, involving isolating the protease in the presence of a gretucing agent, refolding the isolated protease by contacting it with a creducing agent, and LDAO in the presence of reduced concentration of the protease, involving inclustring refolded inactive NS2/3 protease, involving inclustring the auto-cleavage of the NS2/3 protease in a medium containing an activation detergent to induce auto-cleavage of NS2/3 protease, involving inclustring the active NS2/3 protease and produce Coleavage products or their fragments, and measuring the presence of the NS2/3 protease, involving inclustring the active NS2/3 protease and produce Cleavage products or their fragments, and measuring the presence of the potential inhibitor, comparing the amount of uncleaved contactivity of an containing the potential inhibitor, comparing the amount of uncleaved in cleavage products or their fragments. The presence of the development of in vitro assays for screening novel inhibitors of an contactive NS2/3 protease with contact characterisation of the enzymes and in the development of in vitro assays for screening novel inhibitors of confidence of the screen of the s streptavividin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             멂
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
The invention relates to an isolated polypeptide consisting of a full-length HCV (hepatitis C virus) non-structural (NS)2/3 protease (referred to also as NS2/3 (810-1206)), or its truncation, having as its N-terminal residue amino acid 810 to 906, or having a minimal amino acid sequence from residues 904 to 1206 of hepatitis C virus (HCV).1b-40 full-length NS2/3 protease. Also included are (1) a composition (C) comprising an isolated HCV NS2/3 protease selected from full length NS2/3 protease, or its truncation or a murated sequence, where the protease is in a solution
                                                                                                                                                                                                                                                                                                                  Novel polypeptide for screening inhibitors of non-structural proteases useful as therapeutic agents against hepatitis C virus, comprises full length non-structural protease, or its truncation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        HCV; enzyme; protease; NS2/3 (904-1206); hepatitis C virus infection; chronic liver disease; cirrhosis; end-stage liver disease; virucide; hepatotropic; antiinflammatory; lauryldiethylamine oxide; LDAO;

Novel polypeptide for as therapeutic non-structural screening inhibitors of non-structural proteases agents against hepatitis C virus, comprises full protease, or its truncation.

Claim 41; Page 62-63; 67pp; English.

CC residue amino acid 810 to 906, or having a minimal amino acid sequence CC from residues 904 to 1206 of hepatitis C virus (HCV) 1b-40 full-length CC NS2/3 protease. Also included are (1) a composition (c) comprising an CC isolated HCV NS2/3 protease selected from full length NS2/3 protease, or CC its truncation or a mutated sequence, where the protease is in a solution CC comprising a sufficient concentration of lauryldisthylamine oxide (LDAO) CC to prevent auto-cleavage of the protease; (2) a NS2/3 inhibitory peptide appearing as ABG32198; (3) producing (M1) a refolded, inactive HCV NS2/3 protease, involving isolating the protease in the presence of a CC chaotropic agent, refolding the isolated protease by contacting it with a CC chaotropic agent or a polar additive; (4) producing (M2) an active NS2/3 protease, involving diluting refolded inactive NS2/3 protease in a medium CC containing an activation detergent to induce auto-cleavage of the NS2/3 CC protease, involving incubating the active NS2/3 protease in a medium CC containing an activation detergent to induce auto-cleavage of the NS2/3 CC protease, involving incubating the active NS2/3 protease activity of NS2/3 CC protease, involving incubating the active NS2/3 protease produced by M2 CC for sufficient time to induce auto-cleavage products or their fragments, and measuring the presence of cc laevage products or their fragments, and measuring the presence of cc absence of the potential inhibitor, comparing the amount of uncleaved CC useful for detailed biochemical characterisation of the enzymes and in the pritro account of uncleaved is cuseful for detailed biochemical characterisation of the enzymes and in the protease is the development of in vitro assays for screening novel inhibitors of NS2/3 protease which are useful as therapeutic agents against HCV infection (which causes chronic liver disease, cirrhosis and end-stage liver disease. Mis useful for high level production of protease. The present sequence represents the NS2/3 truncation mutant 866-1206 (numbered relative to the full length NS2/3 protein) length HCV (hepatitis C virus) non-structural (NS)2/3 protease (referred to also as NS2/3 (810-1206)), or its truncation, having as its N-terminal to an isolated polypeptide consisting of a C virus) non-structural (NS) 2/3 protease (1

Novel polypeptide for screening inhibitors of non-structural proteases useful as therapeutic agents against hepatitis C virus, comprises full length non-structural protease, or its truncation.

Claim 41; Page 61-62; 67pp; English.

The invention relates to an isolated polypeptide consisting of a fullCC length HCV (hepatitis C virus) non-structural (NS)2/3 protease (referred CC to also as NS2/3 (810-1206)), or its truncation, having as its N-terminal CC residue amino acid 810 to 906, or having a minimal amino acid sequence from residues 904 to 1206 of hepatitis C virus (HCV) 1b-40 full-length CC (NS2/3 protease. Also included are (1) a composition (C) comprising an CC its truncation or a mutated sequence, where the protease is in a solution CC comprising a sufficient concentration of lauryldiethylamine oxide (LDAO) CC comprising as ABG32198, (3) producing (M1) a refolded, inactive HCV NS2/3 concentration of lauryldiethylamine oxide (LDAO) CC chaotropic agent, refolding the protease in the presence of a concentration of the protease, involving isolating the protease in the presence of a containing agent, and LDAO in the presence of reduced concentration of the containing an activation detergent to induce auto-cleavage of the NS2/3 protease, involving includating the isolated protease by contacting it with a containing an activation detergent to induce auto-cleavage of the NS2/3 protease, involving incubating the active NS2/3 protease in a medium containing an activation detergent to induce auto-cleavage of the NS2/3 protease, involving incubating the active NS2/3 protease and produce colleavage producets or their fragments, and measuring the presence or cleavage producet or their fragments, and measuring the presence or

The invention relates to an isolated polypeptide consisting of a full-
CC length HCV (hepatitis C virus) non-structural (NS)2/3 protease (referred
CC to also as NS2/3 (810-1206)), or its truncation, having as its N-terminal
CC residue amino acid 810 to 906, or having a minimal amino acid sequence
CC (NS2/3) protease Also included are (1) a composition (C) comprising a sufficient concentration of lauryldiethylamine oxide (LDAO)
CC comprising a sufficient concentration of lauryldiethylamine oxide (LDAO)
CC comprising a sufficient concentration of lauryldiethylamine oxide (LDAO)
CC comprising a sufficient concentration of lauryldiethylamine oxide (LDAO)
CC comprising a sufficient concentration of lauryldiethylamine oxide (LDAO)
CC control agent, refolding the protease in the presence of a
CC reducing agent, and LDAO in the presence of reduced concentration of the
CC reducing agent or a polar additive, (4) producing (M1) an active NS2/3
CC protease, involving isolating the protease by contacting it with a
CC containing an activation detergent to induce auto-cleavage of the NS2/3
CC protease; (5) measuring (M3) the auto-cleavage activity of NS2/3
CC protease; (6) measuring (M3) the active NS2/3 protease and produce
CC cleavage products or their fragments, and measuring the presence or
CC absence of uncleaved NS2/3 protease, cleavage products or their fragments of the presence of, or
CC absence of the potential inhibitor of auto-cleavage activity of an
CC uneful for detailed biochemical characterisation of the emount of uncleaved
CC uneful for detailed biochemical characterisation of the protease in the development of in vitro assays for screening novel inhibitors of
CC uneful for detailed biochemical characterisation of the enzymes and in
CC uneful for detailed biochemical characterisation of the enzymes and in
CC uneful for detailed biochemical characterisation of the enzymes and in
CC uneful for a section of the protease. The
CC intertory for the protease of the NS2/3 protease of the NS2/3 protease. The protease o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel polypeptide for screening inhibitors of non-structural proteases useful as therapeutic agents against hepatitis C virus, comprises full length non-structural protease, or its truncation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hepatitis C virus Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HCV; enzyme; protease; NS2/3 (815-1206); hepatitis C virus infection; chronic liver disease; cirrhosis; end-stage liver disease; virucide; hepatotropic; antiinflammatory; lauryldiethylamine oxide; LDAO; chaotropic agent; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 41; Page 59-60; 67pp; English

CC Ineight HCV (hepatitis C virus) non-structural (NS)2/3 procease (referred CC to also as NS2/3 (810-1206)), or its truncation, having as its N-terminal CC residue amino acid 810 to 906, or having a minimal amino acid sequence CC from residues 904 to 1206 of hepatitis C virus (HCV) 1b-40 full-length CC NS2/3 protease. Also included are (1) a composition (C) comprising a sufficient concentration of lauryldiethylamine oxide (IDAO) CC comprising a sufficient concentration of lauryldiethylamine oxide (IDAO) CC comprising a sufficient concentration of lauryldiethylamine oxide (IDAO) CC comprising as sufficient concentration of lauryldiethylamine oxide (IDAO) CC comprising as sufficient concentration of lauryldiethylamine oxide (IDAO) CC comprising as sufficient concentration of lauryldiethylamine oxide (IDAO) CC concentration as ABG32198; (3) protease; (2) a NS2/3 inhibitory peptide concentration gagent, refolding the protease in the presence of a chatropic agent or a golar additive; (4) producing (M2) an active NS2/3 CC protease, involving isolating the protease by contacting it with a creducing agent or a golar additive; (4) producing (M2) an active NS2/3 protease; (5) measuring (M3) the auto-cleavage activity of NS2/3 CC protease; (6) measuring (M3) the auto-cleavage activity of NS2/3 protease; (7) measuring the active NS2/3 protease produced by M2 CC cleavage products or their fragments, and measuring the presence or cative NS2/3 protease, involving incubating the active NS2/3 protease produced by M2 CC absence of the potential inhibitor; of auto-cleavage activity of an active NS2/3 protease, involving carrying out M3 in the presence of a cative NS2/3 protease, involving carrying out M3 in the presence of cative NS2/3 protease, involving carrying out M3 in the protease is consistent of the development of in vitro assays for screening novel inhibitors of an inhibitors of an inhibitors of inhibitors of active NS2/3 protease is useful for high level production of protease. The consistent of the consistent of the c devoid of autocatalytic activity

Thibeault D, Ů, Maurice R, Pilote L,

Novel polypeptide for screening inhibitors of non-structural proteases useful as therapeutic agents against hepatitis C virus, comprises full length non-structural protease, or its truncation.

Example 7; Fig 8; 67pp; English

CC length HCV (hepatitis C virus) non-structural (NS)2/3 procease (referred CC length HCV (hepatitis C virus) non-structural (NS)2/3 procease (referred CC to also as NS2/3 (810-1206)), or its truncation, having as its N-terminal CC residue amino acid 810 to 906, or having a minimal amino acid sequence CC from residues 904 to 1206 of hepatitis C virus (HCV) 1b-40 full-length CC (NS2/3) protease. Also included are (1) a composition (C) comprising a sufficient concentration of lauryldathylamine oxide (LDAO) CC comprising as ABG32198; (3) protease; (1) a refolded, inactive HCV NS2/3 protease, involving isolating the protease in the presence of a chaotropic agent, and LDAO in the presence of a protease, involving dislating refolded inactive NS2/3 inhibitory peptide CC chaotropic agent or a polar additive; (4) producing (M1) an active NS2/3 (C protease, involving diluting refolded inactive NS2/3 inhibitory peptide CC chaotropic agent or a polar additive; (4) producing (M2) an active NS2/3 protease; (5) measuring (M3) the auto-cleavage activity of NS2/3 protease; (6) measuring (M3) the auto-cleavage activity of NS2/3 protease; (6) measuring (M3) the auto-cleavage of the presence of and produce cleavage products or their fragments, and measuring the presence of and produce apsence of incleaved NS2/3 protease, cleavage products or their fragments, and measuring the presence of and protease, involving incubating the active NS2/3 protease produced by M2 (C protease, involving incubating the active NS2/3 protease and produce cleavage produces or their fragments or their fragm

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ce residue amino acid 810 to 906, or having a minimal amino acid sequence from residues 904 to 1206 of hepatitis C virus (HCV) 1b-40 full-length CC NSZ/3 protease. Also included are (1) a composition (C) comprising an isolated HCV NSZ/3 protease selected from full length NSZ/3 protease, or cits truncation or a mutated sequence, where the protease is in a solution comprising a sufficient concentration of lauryldiethylamine oxide (IDAO) to prevent auto-cleavage of the protease; (2) a NSZ/3 inhibitory peptide grotease, involving isolating the protease in the presence of a creducing agent, refolding the protease in the presence of a creducing agent, and IDAO in the presence of reduced concentration of the containing agent or a polar additive; (4) producing (M2) an active NSZ/3 protease, involving diluting refolded inactive NSZ/3 protease in a medium containing an activation detergent to induce auto-cleavage of the NSZ/3 compresses; (5) measuring (M3) the auto-cleavage activity of NSZ/3 compresses; (5) measuring (M3) the auto-cleavage activity of NSZ/3 compresses; involving incubating the active NSZ/3 protease and produce cleavage products or their fragments, and measuring the presence or containing a potennial inhibitor of auto-cleavage activity of an active NSZ/3 protease, involving carrying out M3 in the presence of contactive NSZ/3 protease, involving carrying out M3 in the presence of out absence of the potential inhibitor, comparing the amount of uncleaved NSZ/3 protease, cleavage products or their fragments. The protease is cuseful for detailed biochemical characterisation of the enzymes and in the development of in vitro assays for screening novel inhibitors of notease is settled biochemical characterisation of the enzymes and in the development of in vitro assays for screening novel inhibitors of contactive to their fragments. The protease. The contactive to the full length NSZ/3 protease. The material inhibitors of the carrying out of the carrying out of the carrying out of the carrying out of the carrying

The invention relates to an isolated polypeptide consisting of a fullcalled as NS2/3 (810-1206)), or its truncation, having as its N-terminal
caresidue amino acid 810 to 906, or having a minimal amino acid sequence
care from residues 904 to 1206 of hepatitis C virus (HCV) lb-40 full-length
care (NS2/3) protease. Also included are (1) a composition (c) comprising a sufficient concentration of lawyldiethylamine oxide (LDAO)
care to prevent auto-cleavage of the protease; (2) a NS2/3 inhibitory peptide
cappearing as ABG22198; (3) produces in the presence of a
cappearing as ABG22198; (3) produces by contacting it with a
cappearing agent, refolding the isolated protease by contacting it with a
cappearing agent or a polar additive; (4) producing (M1) an active NS2/3
caprotease, involving isolating refolded inactive your active NS2/3
caprotease; involving diluting refolded inactive your active NS2/3
caprotease; involving incubating the auto-cleavage of the NS2/3
caprotease; involving incubating the auto-cleavage of the NS2/3
caprotease; involving incubating the auto-cleavage of the NS2/3
caprotease; involving incubating the active NS2/3 protease and produce
cappearing an activation detergent to induce auto-cleavage of the NS2/3
caprotease; involving incubating the active NS2/3 protease and produce
cappeared (5) measuring (M3) the auto-cleavage products or their fragments
cappeared (6) screening a potential inhibitor of auto-cleavage activity of NS2/3
cappotease; involving incubating the active NS2/3 protease produced by M2
cappote of the potential inhibitor of auto-cleavage activity of an active NS2/3 protease, involving carrying out M3 in the presence of an active NS2/3 protease, involving carrying out M3 in the presence of an active NS2/3 protease, cleavage products or their fragments. The protease is
cappeared of the potential inhibitor, comparing the amount of uncleaved
cappearing as a serious conducts or their fragments. The protease is
cappeared of the protease windown to the enzymes and in the presence of the Query Match Best Local S Matches 292 Novel polypeptide for screening inhibitors of non-structural proteases useful as therapeutic agents against hepatitis C virus, comprises full length non-structural protease, or its truncation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
The invention describes a self-replicating hepatitis C virus (HCV) coplynucleotide molecule comprising a 5'-non translated region (NTR), cc where guanine at position 1 is substituted for adenine, a HCV polyprotein region coding for a HCV polyprotein; and a 3'-NTR region. The self-cc replicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also cuseful for efficiently establishing cell culture replication. The self-cc replicating polynucleotide molecule contains a 5'-NTR, where G at constituent is substituted for A, and therefore provides an alternative to conjunction with mutations in the HCV non-structural region, such as the CG (2042) C/R mutations, transduces and/or replicates with greater cc efficiency. This amino acid sequence represents a mutant of the hepatitis complex NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS5B. Note:
                                                                                                                                                                                                                                                                                                New self-replicating RNA molecules from Hepatitis C virus (HCV), which possess enhanced transduction or replication efficiency, useful for evaluating potential inhibitors of HCV replication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Self-replicating; hepatitis C virus; HCV; HCV replication inhibitor; cell culture replication; NS2/3; NS3/4; NS3; NS5B; mutant; mutein.

                                                                               밁
                                                                                                                 Š
                                                                                                                                                                                                                                         The invention describes a self-replicating hepatitis C virus (HCV) complynucleotide molecule comprising a 5'-non translated region (NTR), where guanine at position 1 is substituted for adenine, a HCV polyprotein cegion coding for a HCV polyprotein; and a 3'-NTR region. The self-creplicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-creplicating polynucleotide molecule contains a 5'-NTR, where G at conjunction is substituted for A, and therefore provides an alternative to conjunction with mutations in the HCV non-structural region, such as the CG (2042) C/R mutations, transduces and/or replicates with greater complex NSJ/A, helicase NSJ and RNA-dependent RNA polymerase NSJB. Note: This sequence was a specification but has been created the wild type sequence shown in ABG30580 using information given in the claims of the invention
                                                                                                                                                         Query Match

                                                                 В
                                                                                          Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes a self-replicating hepatitis C virus (HCV) copolynucleotide molecule comprising a 5'-non translated region (NTR), come where guanine at position 1 is substituted for adenine, a HCV polyprotein region coding for a HCV polyprotein; and a 3'-NTR region. The self-complicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-creplicating polynucleotide molecule contains a 5'-NTR, where G at conjunction is substituted for A, and therefore provides an alternative to conjunction with mutations in the HCV non-structural region, such as the CC conjunction with mutations in the HCV non-structural region, such as the CC (2042) C/R mutations, transduces and/or replicates with greater complex NSJ/4, helicase NSJ and RNA-dependent RNA polymerase NSJS. Note: This sequence was an alternation but has been created complex NSJ/4, helicase NSJ and RNA-dependent RNA polymerase NSSS. Note: This sequence shown in ABG30580 using information given in the claims of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes a self-replicating hepatitis C virus (HCV) copolynucleotide molecule comprising a 5'-non translated region (NTR), come where guanine at position 1 is substituted for adenine, a HCV polyprotein region coding for a HCV polyprotein; and a 3'-NTR region. The self-complicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-creplicating polynucleotide molecule contains a 5'-NTR, where G at position 1 is substituted for A, and therefore provides an alternative to conjunction with mutations in the HCV non-structural region, such as the CG G(2042)C/R mutations, transduces and/or replicates with greater conficiency. This amino acid sequence is encoded by the hepatitis C virus replicates with greater and contains the viral procease NS2/3, procease complex CC NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS5B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

genome polyprotein - hepatitis C virus (strain J)
N;Contains: capsid protein C; envelope protein M; major envelope protein E; nonstructural protein NS4a; nonstructural protein NS4b; nonstructural protein NS5
C;Species: hepatitis C virus
C;Accession: A39253; PS0086
R;Kato, N.; Hijikata, M.; Ootsuyama, Y.; Nakagawa, M.; Ohkoshi, S.; Sugimura, T.; Shimot Proc. Natl. Acad: Sci. U.S.A. 87, 9524-9528, 1990
A;Ritle: Molecular cloning of the human hepatitis C virus genome from Japanese patients
A;Reference number: A39253; MUID:91088550; PMID:2175903

GNWVUB

genome polyprotein - hepatitis C virus (strain HC-J8)

genome polyprotein C; envelope protein M; hepacivirin (EC 3.4.21.98)

N; Contains: capaid protein C; envelope protein M; hepacivirin (EC 3.4.21.98)

Protein NS4a; nonstructural protein NS4b; nonstructural protein NS5

C; Species: hepatitis C virus

C; Date: 31.Dec-1992 #sequence revision 31-Dec-1992 #text_change 19-Jan-2001

C; Accession: A40250; PQ0397; PQ0559

C; Accession: A40250; PQ0397; PQ0559

Genome polyprotein [Contains: Capsid protein C (Core protein P2);
Envelope glycoprotein E1 (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GP70) (NS1); Protein P7; Nonstructural protein NS2 (P21)
(EC 3.4.22.-); Protease/helicase NS3 (P70) (Hepacivirin)
(EC 3.4.21.98); Nonstructural protein NS4A (P4); Nonstructural protein
NS4B (P27); Nonstructural protein NS5A (P56); Nonstructural protein
NS4B (P66) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
NS5B (P66) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate Japanese) (HCV).
Viruses; ssRNA positive-strand viruses, no DNA stage; Flaviviridae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SEQUENCE FROM N.A.

"Molecular structure of the Japanese hepatitis C viral genome.";
PEBS Lett. 280:325-328(1991).

1- FUNCTION: The small proteins NS2A, NS2B, NS4A and NS4B are hydrophobic, suggesting a possible membrane-related function and NS5 may play a role in the viral RNA replication.

1- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in P1 and Ser or Ala in P1'.

1- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate
                                                                     {RNA}(N).

-! SUBUNIT: The virion of this virus is a nucleocapsid covered lipoprotein envelope. The envelope consists of two proteins protein M and glycoprotein E. The nucleocapsid is a complex protein C and mRNA.

-!- SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S29.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            POLG

C -i- FUNCTION: The small proteins NS2B, NS2B, NS4A and NS4B are hydrophobic, suggesting a possible membrane-related function. NS3

and NS5 may play a role in the viral RNA replication.

-i- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6

position, Cys or Thr in P1 and Ser or Ala in P1'.

-i- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +

"Structure of the hepatitis C virus RNA helicase of the Kapatina C virus RNA helicase of the Kapatina C virus RNA helicase of the Struct. Biol. 4:463-467 (1997).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCASSID COVERED B LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS; AND 22. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA. PTM: THE STRUCTURAL PROTEINS C, E1 AND 82 ARE PRODUCED BY PROTEOLYTIC PROCESSING BY THE HOST SIGNAL PEPTIDASES. SIMILARITY: THE NS2 PROTEASE BELONGS TO PEPTIDASE FAMILY U39. SIMILARITY: THE NS3 PROTEASE BELONGS TO PEPTIDASE FAMILY S29.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PUNCTION: The small proteins NS2A, NS2B, NS4A and NS4B are hydrophobic, suggesting a possible membrane-related function. and NS5 may play a role in the viral RNA replication. CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viprecursor polyprotein, commonly with Asp or Glu in the P6 position. Ys or Thr in P1 and Ser or Ala in P1.

CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          protein C and mRNA.
SIMILARITY: THE PROTEASE BELONGS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    lipoprotein envelope. The envelope consists of two proteins: protein M and glycoprotein E. The nucleocapsid is a complex protein C and mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SUBUNIT: The virion of this virus is a nucleocapsid covered by lipoprotein envelope. The envelope consists of two proteins:
        protein; Glycoprotein; Transferase; RNA-directed RNA polymerase; protein; Coat protein; Envelope protein; Helicase; ATP-binding; protein; Hydrolase; Serine protease. smembrane; Nonstructural protein, Hydrolase; Serine protease. MET
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GNWVJ8.
